

# New!

## Help nurses safely achieve early mobility compliance for seated patients

For Safe Patient Handling!

### The Prevalon® Seated Positioning System helps reduce risk of clinician injury

Now there's a way to help nurses safely glide patients to an upright seated position in the bedside chair, which encourages early patient mobility—without lifting.

Bring Safe Patient Handling to your early mobility protocol. Try the NEW Prevalon Seated Positioning System.

Call 800.323.2220 or visit [sageproducts.com/sps](http://sageproducts.com/sps) for more information and a FREE demonstration!

The Prevalon Seated Positioning System (SPS) helps address:

**Force:** A recent study demonstrated that nurses were able to safely position patients using 246% less exertion with SPS versus draw sheets<sup>1</sup>

**Repetition:** Engineered to help patients remain in the upright seated position to minimize repetitive boosting and repositioning

**Posture:** Promotes proper body mechanics by enabling nurses to glide patients to the back of the chair—without lifting
